

Woodworking Machinery

Course Delivery

- Courses are designed and costed to the individual company and employee requirements, ensuring that high compliance is met using such machines
- All training can be delivered within the companies premises, giving the benefits to employees of being trained on machines they are already familiar with
- Course duration can vary, depending upon the number of people, their experience and machine requirements
- A typical course can be from one to three days, depending upon number of people and machines

Machines Covered

- Circular saws, spindle moulders, planers, band saws and many others

Theory & Practical Testing and Assessment

Once training is complete a Woodwise certificate of training is issued. Operators are then assessed for competence by taking the certificate of competence, which is a City & Guilds backed qualification, which enables employers to demonstrate compliance with safety regulations.

Legal Requirements

For many employers, keeping up with legal requirements is difficult and in many instances, regulations only come to light during an inspectors visit, or worse after an accident.

Machine training is required, regardless of the number of employees, their experience and qualifications.
